

Biofilm colonisation area calculation

Tatyana Pichugina

5/13/2019

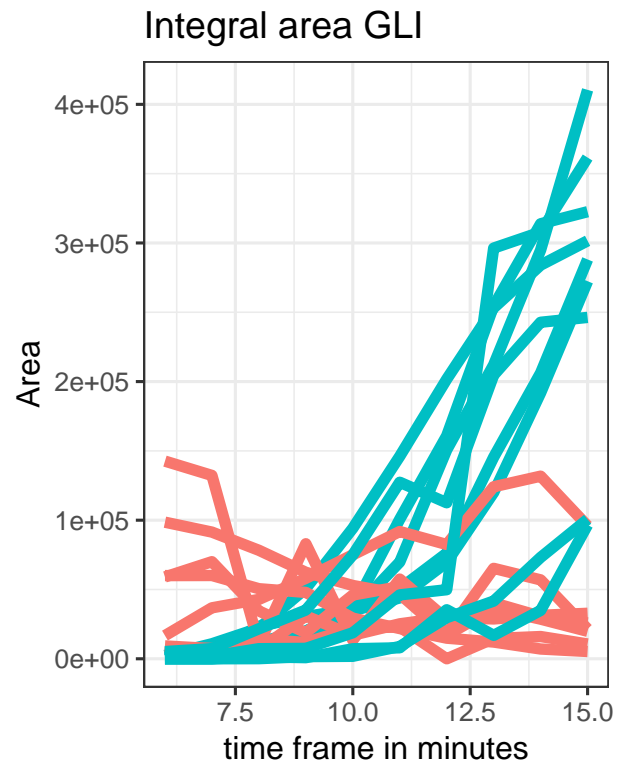

Integral area

Integral area represent sum of the colonized pixel for each frame. Each frame represent one hour of experiment. Here we are interested in 15 first hours.

Integral area ALI and GALI

We cutted each image to the two parts: ALI part includes 200px (32mkm) layer counted from the ALI, and GLI part includes rest part of the image. The integral area per Strain expreriment is shown below.

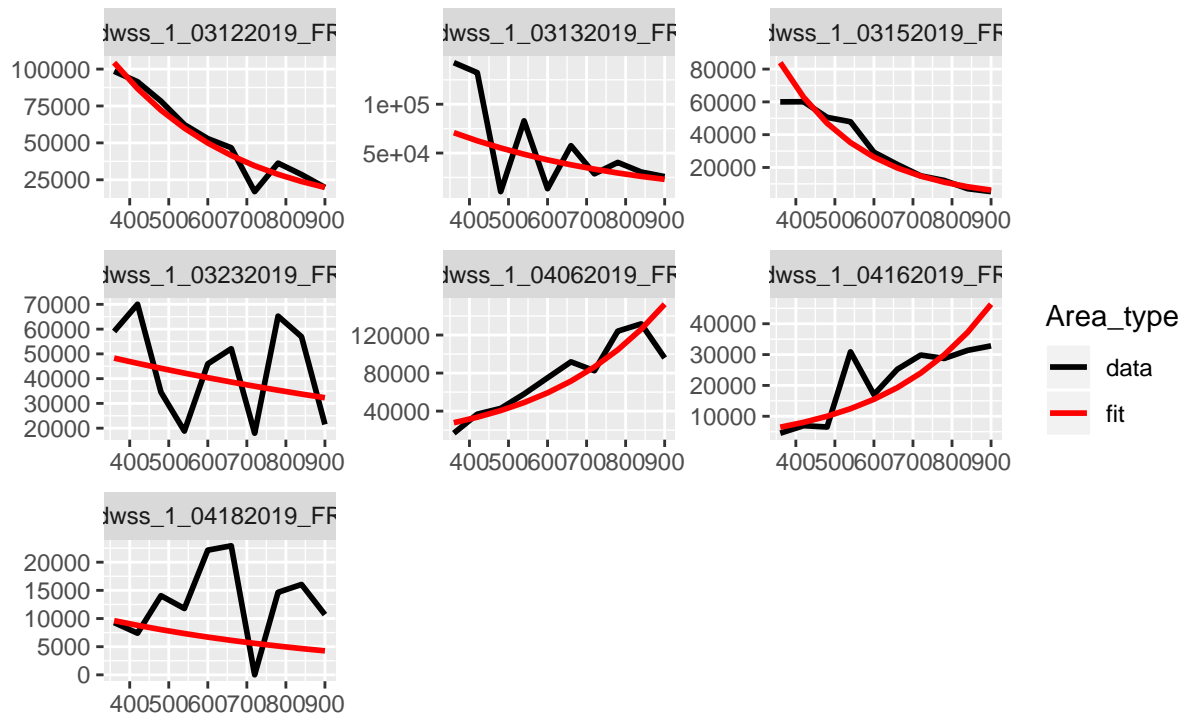

Strain — dwss — SM

We fitted ALI and GALI separately by $\text{Log}(\text{Area}) \sim A + B \cdot \text{frame}$.
